Directions for use

The ATM-65 is not self supporting. Guy wires must be used to support the mast when it is extended. Do not attempt to use this product without them. Take care not to bend the mast when collapsed. Any bend or dent in the tubing will prevent it from extending. A minimum of 3 inches overlap of tubing must be used.

When using as a mast

The size and weight of the antenna you use will determine where to place it on the mast. For instance, a large antenna should be placed on one of the lower sections of the tubing where the mast diameter is large enough to support the antenna weight. When installing an antenna to the mast, be careful not to deform the tubing as it will prevent it from collapsing.

When using as an antenna

A mast insulation kit, such as the ATB-65 or some other means of insulating the mast from the ground should be used. Guying of the antenna will be required if it is extended beyond 30 ft.
